Cou

ACORN'S new £489 BBC B Plus micro (see Popular Computing Weekly, April 25) should be available in the shops this week.

The company has apparently been building up stocks

of the machine for some time. but delayed the announcement until it was confident it could meet demand.

The new machine is not intended in any way to be a replacement for the BBC B,"

said an Acorn spokesman.

The company does not intend to develop new software specifically for the Plus which will not run on the BBC B. "New software which takes advantage of the extra memo-

Replying to the claim that

the price cut on the Plus/4

ry will not depend on it to run," he added.

The B Plus is intended as a refined version of the standard BBC B model. It has the same operating system and BBC Basic combined on to a single chip, an enhanced disc interface, and disc utilities such as formatting are now built-in. The extra 32K Ram is divided between 20K of shadow screen Ram and 12K of paged Ram. Modes 128 to 135 are the shadow screen Ram equivalents of Modes 0 to 7.

Additional disc filing commands include Format, Verify, Free, Mat, Roms, and

At the same time Acorn has

improvement in the Rom having done that we will reconsider its position. Last year it was felt that bundled software would be a hit, but what has been shown in that people are more concerned with compatibility."

He also denied any possibility that the forthcoming C128 might replace the 64.

'The C128 is being aimed continued on page 4 >

FAR LEFT Ultimate has released its second Commodore 64 title, Entombed, a sequel to Staff of Karnath.

Entombed at £9.95 is an arcade adventure with high resolution 3D graphics and complex puzzles.

LEFT Dun Darach, the sequel to the critically acclaimed Tir Na Nog is now nearly completed. The game involves a number of characters as well as hero Cuchulainn.

C64 price drop ruled out

COMMODORE UK's new general manager Nick Bessey spoke out last week against any possible price cuts on the Commodore 84.

"We will not be cutting the price of the 64 within Commodore," he said. "The product should be sold at around £200, and I believe it can justify that price."

He was speaking in response to claims by Boots and Laskys that they were considering dropping the Commodore 64 because of the recent high street price war, including a swingeing price cut for the Plus/4 (see Popular Computing Weekly, April 18).

"I see the Commodore 64

Nick Bessey

as being our major product at least until 1986, but I have sympathy with the retailers' position - if I were in their place I would be concerned about Commodore's marketing programmes. We urgently need to work with the high street, and will shortly be showing them our marketing plans for the year.

ecent reports have suggested that Chris Curry and Hermann Hauser are unhappy with the way things are going at Acorn, following its takeover by Olivetti.

Yet things seem is be carrying on much as before.

The new Acorn BBC B Plus at £499 is as overpriced as any previous Acorn product. Just who is going to pay £500 for a 64K B-bit micro? A poser, is it not? Especially when Atari's new 130XE uses the same processor chip, offers 128K Ram and costs only £170 around one third of the price.

Further, the BBC B Plus' price tends to indicate that the machine is to sell along-side the present BBC B and that the long hoped-for price cut of the older machine from £400 will now not happen.

In fact, the launch of the £500 II Plus may well heraid the end of Acorn as a serious force in the home computer business.

With such a blinkered pricing policy - BBC name or not - the B Plus will fail in what one presumes is its main objective: Is tide Acorn over until the software compatible 18-bit version of the BBC can be produced.

Instead the B Plus will be greeted by universities and research laboratories in industry as an enhancement of what is already a very successful development tool. Here the BBC's excellent interfacing for control applications and the Plus' extra Ram and the additional Rom socket will be welcomed. And Acom may sell a few thousand.

Either Olivetti shows the same understanding of the home market as the 'old' Acom demonstrated or the company is deliberately attempting to pull Acom out of the dangerously volatile home computer arena.

Computer Trade Association Magazine of the Year

Beyond names Monolith as arcade games label

BEYOND's new arcade software label, first announced in March, is to be called Monolith.

The first two releases will be Rockford's Riot, the sequel to Boulderdash, and Quake-I, a shoot-'am-up written by Mike Singleton and Warren Floulkes, using the landscaping techniques pioneered in Lords of Midnight.

Rockford's Riot will also feature the original Boulderdash on the flip side.

It will be for the Commodore 64 and Spectrum initially, with Amstrad and Atari versions to follow. Quake-I will run on the Commodore III.

Monolith will be a "highquality label" claimed managing director Bill Delaney.

Monolith games, likes those released on the Beyond label, will sell for £9.95.

The next new game to be released under the original Beyond label will be Elindor, a fantasy epic inspired by Lords of Midnight.

"It will be more than just a graphic adventure - it's obviously a game aimed at our Midnight followers, in a similar game vein, but it is original in its own right," said Bill Delaney. The game design has been approved by Mike Singleton, but he has taken no part in the programming of it instead game design and programming are by two seventeen year olds, Simon Welland and Nick Eastock.

C64 cuts

continued from page 1

at people who know the 64 and feel they can use the extra memory – while we see it as an important product it is in no way intended to replace the 64.

"The compatibility is its most important feature, which is why we're aiming it at the up-graders. We plan to sell the basic model first and then offer the 128D version with a disc drive built-in later."

The C128 will be shown for the first time in the UK at the Commodore Show in June, but Nick was unwilling to give a definite release date.

"I am confident we can deliver the machines in quantity for the last four months of the year — in fact, before September if possible. But it in important to get our relationship with the high street retailers back to last year's footing by supplying in quantity."

Nick also dismissed suggestions that the C128 at around £315 might be affected by the Atari 130XE at \$150.00.

"We will not be influenced by the sabre-rattling of our competitors - frankly, the C128 is not similar to the 130XE - it's in a class of its own."

 There will be a full interview with Nick Bessey in next week's magazine.

Tandata buys QL modem rights

TANDATA has come to the rescue of QL owners and bought the existing stocks of the OCom modern.

The QCom QL modem package was previously manufactured by OEL, which went into receivership in March (see Popular Computing Weekly, March 21).

Tandata which will now take over selling QCom has also acquired the rights to produce the QCom package and the rights to sell Scicon's communications software which is bundled with QCom. "We are now only waiting for BT approval on QCom," said

New games, new boss at Melbourne

WAY of the Exploding Fist - a joystick-controlled martial arts simulation - will be the next release from Melbourne House.

The arcade-style game will be launched next month for the Spectrum, Commodore 84 and Amstrad, priced around \$8-£9.

It is also the first title to be announced by Melbourne House's new UK managing director.

Geoffrey Heath

Geoffrey Heath, formally Activision UK's chief, has moved across to take charge of Melbourne House's UK operation, which was previously controlled from its Australian headquarters.

"I was asked to get Activision up and going in

a spokeswoman for Tandata.
"The approval procedure
was put in abeyance when
OEL called in the receiver,
but it shouldn't take too long.
The product only needs its
approval number to be given, before we can begin sales
and production."

The spokeswoman stressed, however, that Tandata had not bought other OEL products which include the Spectrum VTX5000 modem and a telextext adaptor for Channel 4.

New micro series on BBC

THE BBC's latest vehicle for promoting computer literacy and the BBC micro is the new children's television series, Whizz, a puzzle-based program featuring computer software.

Aimed at 5-7 year olds, it uses a futuristic setting, the Space Place, inhabited by a female droid, Whizz, a com-puter called Voice and a rather strange looking Bug to pose various brain-teasers aimed improving youngsters' learning skills, many using commercially available software for the BBC micro. Producer Pippa Dyson commented. "A lot of children of this age group have access to a computer either at home or at school, so we included an element of this in the program."

Software to be used includes BBC Publications' own Maths with a Story and Sort by Mirrorsoft. Four other titles have been commissioned from CRL who are marketing them in twin packs, Space Shapes | Runaway Rocket and Crazy Cows | Cosmic Containers, under licence from the BBC. They will be available from next week for the BBC and Electron priced at £8.95.

Whizz is being broadcast on Fridays at 3.55 pm.

this country, and I like to think I did okay," said Geoffrey. "With Melbourne House, I

"With Melbourne House, I am determined to raise the company's profile considerably — its product certainly warrants it. While it has been acclaimed for adventure titles. I want to open up its whole range — so you can expect more arcade games along the lines of Starion."

the BBC B from £399. "Acom
will not be cutting the price
on existing products," commented the spokesman.

The B Plus will be on show at the Electron and BBC Micro User Show held on the New Horticultural Hall, London SWI on May 9.

Sinclair cuts production

SINCLAIR has admitted it has had to cut back heavily on computer production, as sales to distributors and retailers since Christmas have been disappointing and the value of unsold stocks has increased almost three-fold to £34m the last nine months.

Sir Clive says that Sinclair Research's overdraft is now only around £5m on an annual turnover of £100m-plus and that he hopes a deal can be done to further reduce the overdraft, possibly involving the marketing of the flat screen to under another company's name. An American company has apparently already approached Sinclair with this in mind.

 Sinclair is now claiming sales of 60,000 for the QL, which is due to be launched on mail-order in the US this week.

4.

Second 2000 AD hero becomes micro game

JUDGE DREDD, Megacity One's leading lawman, will soon be joining 2000AD's other great cartoon hero, Strontium Dog, on your computer.

Games Workshop has now gained the rights to produce an arcade game based on the cartoon character from the 2000AD comic magazine. The company already has a Judge Dredd board game, but gained computer rights in a separate deal.

"The game will be a high speed joystick-driven maze game set in Megacity One," said Angus Ryall, Games Workshop's software marketing manager.

"We will probably include a map screen which the player can call up to show where the player is in the city."

The Judge Dredd arcade game is scheduled for release on the Spectrum in the Autumn.

Atari founder bytes cat

A NEW type of micro driven robot is due to be launched in the US in August - the Petster.

Petsters are the latest brainchild of Nolan Bushnell. founder of Atari, who also developed the Androbot robot range.

A Petster is a robot cat. Made of fur, the battery operated device miaous and purrs to order and can be programmed to respond to handclaps or noises, to move back and forth, avoiding obstacles.

If left on its own for any length of time, the Petster will go into one of a number of moods at random, such as playfulness or going to sleep. It will switch off at night and 'wake up' when it gets light.

Long term plans for the Petsters see them as rather more than novelty toys. With additional sensors and software, the Petsters could be programmed to react to burglars or fire in the house, and raise the alarm if necessary.

As toys, however, the Petster will be available in two models, the basic 'miaou and purr' version at around \$50, and a deluxe model at \$70 to \$100. The latter can be programmed to respond to up to 48 commands.

Petsters are set to reach the UK next Christmas.

Linkword follows up

FOLLOWING the success of the Linkword language learning series, a second range of Linkword titles will be available soon.

"The new series will take users up to 'O' level standard, using the same linking of words to mental images as the first series." said Dr Michael Grunenberg, the Swansea University psychologist who developed Linkword.

Dr Gruneberg hopes the advanced level packages can be used within schools as well as by the home user.

The first 'O' level Linkword program to be released will be French, published by Protek for the Spectrum at £12.95.

Cat and mouse

It appears that Michael Sleight (Letters, April 18) has also hit the 'nail on the head!'

The computer industry to day suffers from a lack of thought and consideration towards buyers. Micro manufacturers instead are too busy engrossed in cat and mouse games. They seem only interested in producing new micros designed to compete with rival manufacturers products. Why don't they stop and take some time to find out what kind of computer people actually want?

Cetin Munir 32 Stapleton Hall Road Stroud Green London N4

Disconnected C5 'trikes'

hen are you and all the other computer magazines, going to stop using your valuable newsprint for news and articles related to the Sinclair CS Electric Tricycle.

Please note:

The maker of this machine is Sinclair Vehicles, not Sinclair Research (the ones who make computers), the C5 is neither a computer, nor contains a computer.

Yet the title of your publication suggests that the content, should be, computers.

I bet, in the computer world, hardly anyone really cares about this unconnected venture by Sir Clive.

Malcolm S Collins Ventura Software 7 Heath Drive Chelmsford Essex

You'd be on a loser is you asked any of the several hundred people who entered our C5 competition, the results of which are printed below.

List disable

If you don't want anyone to be able to list your Basic programs and you own a BBC try typing in this small procedure at the beginning of your program.

What will happen, is that when the program is run, and then the Break key is pressed during the time that the program is in operation, Old, List, and Run will produce the error message Bad Program.

1 CLS 2*FX200,2 3*FX220,0 4!&FE00 = &1020AA

"Good heavens - it's Monolith software"

Of course the program must not have an End or Input statement in it otherwise it is possible to list the program. Lines 2 and 3 disable Escape.

Daniel R Ğish Fairmead Cardens Redbridge Essex

Check again

which appears in the April 18 issue, there is an error in the second sentence of the penultimate paragraph in column 1.

The sentence should read:
"It then takes the first two

bytes and converts them to the Line number by PEEK (Byte 2) + 256 * PEEK (Byte 1), note that this is a reversal of normal Z80 practice. The second two bytes (PEEK (Byte 3) + 256 * PEEK (Byte 4)) give the number of Text bytes plus one for Enter."

It would also be advisable to add that the symbol £ appears in the program but should be interpreted as #.

H Hipple 17 Ayrahire Road Liverpool

Milder

while playing with Ver 2.00 Quill on the QL recently I noticed that the loading Boot program is different to that on the old Ver 1.03.

In Ver 1.03 the program uses the Respr, Lbytes, Call sequence while Ver 2.00 uses the Exec-W keyword which is used to load multi-tasking machine code programs. This seems to suggest the possibility of running Ver 2.00 Quill with other machine code programs including Easel, Archive and Abacus.

C5 competition Results

Future perfect

he response to our CS competition (Popular Computing Weekly, 14 March) was quite overwhelming - both in numbers and the amount of work many of the contestants had put into their design for the Sinciair electric car of the 1990's.

The panel of judges - from both Popular and Sinclaix Vehicles - whittled down the several hundred entries to a shortlist of seven before choosing the outright winner and they included both some extremely innovative ideas and a stack of often beautifully drawn pictures.

Alistair Prior developed a clever credit-card locking mechanism for his car of the future. Neil Hewlett designed a complete range of vehicles – bus, taxi, hatchback and saloon. W Wray incorporated the flat screen ty as a standard feature. And Clive Burke nearly wrote an encyclopedia on his creation.

However, there could only be one winner from the short list and the judges manimously selected the entry by 15year old Steven Salmon, of Rayleigh in Essex, The judges said of his design:

"Excellent, very imaginative overall most of his proposals are at least vaguely viable."

A CS will soon be on its way to Steven Salmon.

...7 busy characters, 10 lost chords, 12 hours, 48 Traffic Wardens, 95 London Tube Stations, 126,720 square feet of London, 7 million Londoners ... 943 action filled screens.

BROADSTREET

When the music stops, the mystery begins...

COMMODORE 64 - £7.99

Instead of computers catc technology now has to ca

The way we see it, technology has quite a race on its hands. There's no other home computer in the world that's so

expandable or so updatable as the new Enterprise 64.

And if you're wondering quite how we've managed that, kindly take a closer look at all the outputs on our remarkable new machine.

You'll notice that amongst the usual sockets and terminals we've incorporated a special 66-way expansion port.

This will accept a whole range of new peripherals that are now in the pipeline.

Including those that are a mere twinkle in the eyes of our hardware designers.

We thought this expandability principle was such a good idea, we applied it to the Enterprise's memory, too.

Even in its most basic 64K form, this puts more user RAM at your disposal than almost any other competitor.

hing up with technology, tch up with a computer.

you can increase that figure to a truly extraordinary 3,900K.

Not that that's the only challenge we present to today's

With a screen resolution of up to 672 x 512 pixels, 256 colours and a high speed video processor, the Enterprise will outgun all but the highest quality TV monitors.

And the sophisticated sound chip generates no fewer than 4 voices across 8 octaves in full stereo.

Combine the two and you can create effects that leave today's games looking like pub video tennis of the mid-70's.

For anyone with literary aspirations, the Enterprise also comes complete with an integrated word processor.

Whilst the really serious user will be delighted to discover

Both Cobol and 'C' will be available with CP/M running. and you can even use Lisp, Forth and Z80 assembly language on cartridge without encroaching on user RAM.

The new Enterprise 64.

It hasn't just overraken technology. It's left every other home computer straggling in the distance.

WITH OBSOLESCENCE BUILT-OUT

Software Reviews

In colour

Program Lightmagic Price £14.95 Micro Spectrum 48K Supplier New Generation Software, The Brooklands, 15 Sunnybank, Lyncombe Vale, Bath BA2 4NA.

f all utilities, graphics packages have to be the most popular, with some attaining relative fame. Lightmagic, the latest contender, could be set to leap to the top.

The first thing to emphasise is that, despite a multitude of single key commands, Lightmagic is easily understood thanks to its sensible menu system. Options include eight direction line drawing and banding, plus circles and fill; a brush mode with ten patterns, including a random spray gun; block mode which allows move-

ment, mirroring, etc of sections of pictures; text mode and UDG mode. UDGs are created with an integral, versatile designer, to be used in finished pictures along with alphanumerics.

Various aids are provided, such as the very necessary superimposed grid that helps avoid colour clashes, and a return cursor to reference point facility, useful for starting several lines from one place. Finished artwork can be saved to tape or to a buffer, which encourages experimentation as previous versions of a picture can always be recalled. Sadly there's no printer option and the potential of this package could lead one to wish for hard copy. However documentation is clear admirably Lightmagic should provide hours of pleasure.

Frog fun

Program Cribbly's Day Out Micro Commodore 64 Price £7.95 Supplier Hewson Consultants Ltd., Hewson House, 66b, Milton Trading Estate, Milton, Abingdon, Oxon.

G ribbly's Day Out is aimed at the younger game-playing generation.

Gribbly, the hero is a fullgrown Blabgorian. Entrusted to his care are the baby Blabgorians, known as Gribblets. The hills surrounding their lands are infested with mutant creatures whose favourite delicacy is little Gribblets. So you have to control Gribbly in his quest to rescue the innocent Gribblets and return them to the safety of the caves. To make matters worse, you must also avoid Seon, the insane spider who is unable to control his homicidal tendencies. Gribbly is able to bounce, fly and even blow bubbles at some of the nasties.

The graphics for this game are excellent. Some of the landscapes are truly beautiful with great details and superb colour schemes. I especially like the Gribbly smiles when you're doing well, and then grimaces when you make a mess of things. I can recommend Gribbly's Day Out to all you youngsters of whatever age.

Tom Hussey

Just junk?

Program Junkyard Jalopies Price £1.98 Micro Commodore 84 Supplier Scorpio Camesworld Ltd., 307-313 Corn Exchange Building, Manchester 4.

In funkyard Jalopies, Jim is out to do what we all like doing best - make money. To so this, he collects old automobile parts from the junkyard and puts them together to make new "cars". What a little earner!

First, though, you have to quide fim to the junkvard. This isn't very difficult as you end up only having to jump three barrels. However, when I'm reaches the junkvard, matters are not so straightforward. He has to avoid the deadly rust monster, and a weird creature entirely from made remoulds. A couple of bombs also need to be defused within the time limit.

Like other platform games, you can walk and jump as you

explore the two-screen scrapyard. An intricate series of lifts must be used to reach the higher levels. After he had collected the parts, our hero drives over to the garage to sell his car. Then it's back to a harder junkyard (barrels to jump as well) with more parts to collect.

As you may have gathered it's pretty much your standard Manic Miner derivative and is therefore hardly original.

I must say that I found Junkyard Jalopies rather boring. The game seemed to lack inspiration, with rather slow gameplay and dull graphics.

Tom Hussey

Dr who?

Program Doctor Who and the Warlords Micro BBC Price £9.98 Supplier BBC Publications.

he kindest thing that could be said about the first attempt immortalise the Doctor in computer game form is that it was quite some time ago, and best forgotten. But just enough of the dire memory lingers on to underline the very considerable improvement in this latest effort, a text-only adventure which, if it lacks the special effects of the TV series, has a very definite character and humour of its own.

You, the player, are the Doc's companion when the Tardis lands on the planet of Quantain, to find a land in the last throes of a lengthy civil war. The Doctor insists (as usual) in getting involved in the troubles, this time because his old friend King Varanger may be in danger. But you get separated in the confusion and, when you wake up from the effects of a

stunning blow in the head, you are alone near the battlefield with only a two-way radio to your name and no idea where the Doc has gone.

Wandering around the terrain can be a very risky business, with your own natural greed as a treasure-seeker (that isn't the main aim here, and it can be fatal) as much a danger as anything else. There are some very curious booby-traps scattered around and brigands lie in wait for unwary travellers.

But a little ingenuity will stop you being blown-up, robbed and/or torn to pieces by suspicious royal body-guards, and will even get you some comfortable transport and an escort into the City. Or nearly into it. Even if you work out this route, your troubles are far from over and, despite signs of the royal favour, you will need to keep your wits about you to save yourself, the Doctor and the situation.

A scenario with good descriptions and some nice touches of humour. This time voyage is worth the trouble.

Software Reviews

Right tracks

Program The Tracer Sanotion Micro Commodore 64/ disc drive Price £19.99 Supplier Activision, 16 Harley House, Marylebone Road, London NW1

he Tracer Sanction is very similar in layout and presentation to Activision's other new disc adventure, Mindshadow. However, the two games have totally different plots.

In The Tracer Sanction, you take the role of a tracer - an interplanetary secret agent. The adventure starts in your bose's office. He assigns you a new mission - to catch the (amous criminal, "the wing" Nobody knows what the wing looks like nor where he is. With this minimal dossler. you set out on a trail which will probably cover most of the galaxy.

It's probably a bit easier to make progress in The Tracer Sanction than in most other adventures, but that's not necessarily a bad thing. Sometimes, adventures get a bit too frustrating. What I liked about this one is that you can try virtually anything at any location, though you may have to suffer some wry comments from the computer. For instance, try "waiting" and you gat the sarcastic response "Amazingly, the quiaxy goes about its business". So much better than the usual 'You can't do that here", eh?

It has to be said though, that this is a typically American adventure. I mean, what British adventure would contain the description "It smells like old sneakers in here"? However, like its sister game. The Tracer Sanction is certainly a good adventure and well worth playing.

Tom Hussey

Fast facts

Program Microspread Micro CPC 484 Price £49.90 Supplier Amsoft, Brentwood House, 169 Kings Road, Brentwood, Essex CM14 4EF.

his spreadsheet has been written by a different company to Microscript and Micropen, also put out through Amsoft and it certainly shows in the manual which, although lacking frills, contains all necessary information in an accessible form and has even been written with some evidence of humanity!

Another wonder for this

range is the screen Help menu which summarises all available commands. What it does have in common with the others is that the emphasis is quite strongly on the ability produce documentation and reports from the data the program can be used as a basic word processor for producing letters and so on that have selected rows, columns and labels from the spreadsheet inserted into them. It's a nice feature.

Surprisingly, spreadsheet itself does not take advantage of disc filing each sheet fills 15K with a maximum of 560 cells - this makes it faster that I expected but also throws it into much closer competition with the

new spreadsheet written by Campbell Systems for Amsoft. The latter has some very nice touches which perhaps make it a better mainstream utility, and it also cheaper. Microspread however is stronger on block commands and, of course, text, which will be just what some people are looking for. The formula options did

strike me as a bit strange by offering functions such as ArcCos but not Log but its a small point. Files produced by the sheet can be used to drive the Micrograph business graphics program in the same range but this was not available for review. Tony Kendle

Reports

Program Micropen Micro CPC 464 Price £49.90 Supplier Amsoft, Brentwood House, 169 Kings Road, Brentwood. Esser CM14 4EF.

his CP/M database will justify itself to most people more through its ability to exploit files as large as there is free room on the disc rather than any particular sophisticated facilities. About 80K is free per side im disc on a single drive system which is quite reasonable.

The aspect of Micropan that will make attractive to some is that it can exploit discs to allow data - be manipulated and injected into pre-set

The whole package provides a cheap entry point for report writing, mail merge, involcing, whatever, with better printer control than is possible with masterfile alone. However competition will come from the forthcoming Tasword that will allow mail merge in conjunction with Masterfile data.

Wargames

Program Theatre Europe
Price 58.95 Micro Commodore Supplier PSS, 482
Stoney Stanton Rd, Coventry
CV6 5DG.

ou could say that to put the old Hippy Anthem 'Give Peace a Chance' on a wargame called *Theatre* structures - there's even a bibliography at the back of books on the subject.

Playing the game is mainly a matter of joystick control and you can be either Nato or Warsaw Pact - though this doesn't mean that the game is easy to play and insubstantial - you definitely need to read the manual.

If being a non wargame purist you opt for the Action screens you get a short ar-

Formula One

Program Pole Position Price £9.95 Micro Commodore 64Supplier US Gold Ltd, Unit 10, Parkway Industrial Centre, Heneage St, Birmingham 87 4LY.

ack that favourite, Pole Position, this time marketed by US Gold. As I'm sure you know, this is the original Grand Prix game that began the racing car craze in the arcades. Now, of course, it's been surpassed by video machines like the TX-1 and others, but you can still find this "old-time" in most arcades. The Commodore 64 conversion is very similar to the original - though, with slightly interior graphics.

In addition to a practice session, there are three different races you may enter - Monaco Grand Prix, Namco Speedway and the Datasoft 500. The training run gives you a chance to practise driving the car around the course without any opponents. Before you can enter one of the three races, you must enter a qualifying round to gain a place on the starting grid (your position will depend on the lap time). Then the race (you can choose the number of laps) begins. The screen shows the view from the car as if you were actually seated behind the steering wheel. The joystick can be used for moving left/right, accelerating and slowing down, and swapping between high and low gears. The handling of the car is very good. It's great fun tearing past a car on the outside of a bend at 200 mph. just the stuff for people with nerves of steel.

Europe in which you fight a Russian Invasion of Europe is kind of schizophrenic to say the least

Politics and taste apart though the game is pretty special, probably one of the best wargames we've yet seen with lots of maps, status lists and even screens of nuclear explosion. The game has a horrible realism derived from its firm basis on actual military and political

cade game where you launch missiles and kell things - it's not state of the art but it's O.K. Then the other side gets its turn. It gets more complicated - you can choose launch special missions achieve special ends and, ultimately, go nuclear even to the point of launching everything you've got.

Graham Taylor

Disappointing

Program Pinball Wizard Price £3.95 Micro CPC 464 Supplier CP Software, 10 Alexandria Road, Harrogate HG1 5JS.

he first time I heard of pinball on home computers it struck me as weird choice of game write. I've since come round to the opinion that it can be marvellous fun — well programmed it can play as well as a conventional machine but add all sorts of animated or zappy acreens to play that couldn't possibly be created in real life — all in the comfort of your own home.

Unfortunately Pinball Wizard represents a wasted opportunity. As you so often find with average quality software they have done all the hard bits but completely forgotten the small details that can make a game a joy to play. In this case they have got the movement of the ball off perfectly but have let it down by surrounding it with duli pedestrian features. There is only one, boring screen with the absolute minimum of flashing lights etc and only the barest of sound effects. It should, and could, have been full of zaps and pows and all sorts of amazing things happening that would have drivan lesser mortals from the room in seconds.

Pinball Wizard could have got by as a budget title but for six pounds you could find a lot more worthwhile things to spend your money on, for

example going to play sixty games of pinball!

Tony Kendle

Exotic

Program Super Pipeline 3 Price £9.85 Micro Commodore 64Supplier Taskset Ltd., 13 High Street, Bridlington YO16 4PR.

ges ago, when Super Pipeline was first released, it was a truly excellent game. It combined neat graphics with great sound effects. Now, the follow-up, Super Pipeline 2 is in the shops. This is one follow-up that was certainly worth waiting for.

In case you didn't see the original, the game action is as follows. All you have to do is keep a pipeline in good working condition until it has filled the barrels at the bottom of the screen. Simple, shi Weil, not quite. You control Foreman Fred. To fix any leaks in the pipeline, he has to grab one of his two obedient workmates and take him to repair the damage. The trou-

ble in the pipeline runs through many hostile lands populated by evil insects and vicious tools. These have to be avoided or shot as contact with them is fatal. Fortunately, the workmen are expendable; when one is killed a new one starts running round. (In fact, a good tactic is to use the workmen as shields from the baddies. How ruthless can you get?)

Once you've filled the barrels, it's on to the next network of pipes. Between screens, the odd bit of cartoon action takes place. On one, a workman smashes up a Sinclair CS with a mallet.

Compared with the original, there are a lot more nasties, so the gameplay involves much more dodging and shooting. The graphics have also been improved and a few extra features have been added. In short – mad, hectic, chaotic fun! I can't wait for Super Pipeline 3.

Fast loader

Program Microdrive Fast-Load Price £3.99 Micro Spectrum Supplier Specialist Programs.

icrodrive Fast-Load is, according to its cover, 'the key your microdrive'.

You start by connecting up to eight drives with cartridges inserted. You then load Fast-Load from cassette, though it can be duplicated to cartridge. After a short wait a screen appears, listing all files present in the left hand section; top right are the various functions and below them is an area for prompts.

These include erasing a selected file; initialising a cartridge, wiping all old information; listing all the files and/or sending the list to a printer; displaying file type (Basic or code), size and other details; checking the carridge capacity and finally downloading a chosen file.

All of this is carried out very smoothly and Fast-Load does all that it claims. My main reservation is how useful it really is. If you think that it is and you're careful not to crash it, then this utility should satisfy.

John Minson

Bad hobbits

Program Bored of the Rings Price 25.98 Micro Spectrum 48K Supplier Delta 4 Software, The Shielding, New Road, Swanmore, Hants SO3 9PE.

Delta 4 for admitting that they've been forced to parody a certain trilogy by J. R. R. T*ik**n because some-body else owns the rights. From this situation has arisen a game with an odd atmosphere, in part humorous spoof, in part serious epic

fantasy adventure.

Certainly the former shouldn't offend anybody but the most po-faced hobbitophile indeed there's much to enjoy here, such as the fact that the only reason you take the ring is you're too stupid to avoid it. But the quest itself,

which stretches over three programs, is challenging and atmospherically written.

Interestingly it's all been produced with the Quill and Illustrator, and to excellent effect. The typeface is suitably archaic, and the pictures are far better than those of the Hobbit, which it frequently parodies.

There's an added bonus, if that's the right word, of a

spoof bulletin board on the final side of the tapes, much of which claims to have been removed for legal reasons.

Even if it's not 100% successful, and the tone is uncertain at times, it's better than many seventures and the price is extremely reasonable. So if the idea of 'ASCII runes' appeals or you can't wait for the official adaptation, don't hesitate from buying.

Doubled-up

Program OL Super Backgammon Price \$15.95 Micro QL Supplier Digital Precision, #1 Manor Road, Higham Hill, London E17 SRY.

Backgammon simulations have, I think, largely suffered through poor screen display; often the screen just isn't big enough depict the 'daggers', background and counters all in different colours without the whole thing looking messy.

Digital Precision has more or less succeeded, with red background, black and white daggers, green and grey counters

The game itself is straightforward bog-standard backgammon - you have an option to let the computer roll dice for you, or you can roll your own and input the result. I have only played the former; I would have been far too tempted to cheat otherwise. I have no idea how the difficulty levels are graded, since I thrashed the computer repeatedly on level 4 (the most difficult) and struggled to win on level 1. The computer's idea of tactical play is distinctly at variance with my own, but then, how relevant are tactics in a game reliant on the dice?

However, the game does allow for fast input of moves, by keeping key presses down to a minimum, which is a relief, but there's no doubling cube, not even as an option. The computer is also a stubborn beast, and refuses to resign – or let you resign even when it's plain who will win, which can lead to some very tedious bearing-off sequences, and the congratulatory winning screen is liable to give you migraine.

Like all board game simulations, it's useful for a rainy day, when no-one else wants to play, but is not a patch on the real thing.

The Mersey byte

John Cosk visits England's second city to meed the brains behind Beyond's Shadowfire - Denton Designs

we always had a healthy respect for anything vaguely Liverpudlian... Brookside, the Spinners and Emlyn Hughes notwithstanding that is... on the basis that any city with a spare cathedral, a spare football team and its own dialect of the English language definitely knows what it is doing. And perhaps it's not surprising that the same north-western hotbed of creativity that took the music biz to its heart all those years ago has produced a fair crop of 'software stars'.

Denton Designs, formed out of the chaos of the Imagine collapse just under a year ago, is working on a new approach to games creation. "The Dutch talk about total football - at Denton we talk about total programming." So says

Denton's Steve Cain

Denton is about the nearest thing to an anarcho-syndicalist programming commune that I have yet come across – the credits on their latest opus ran to twelve persons – but it's an approach that definitely works, as does the mix of programmers and artists within the company. It may not be run of the mill, but then, something radical was called for when six of the Bandersnatch 'megagame' team suddenly found themselves out of work in a big way.

Now, installed in its HQ in the shadow of cathedral number two near the famous Lime Street station, with one minor hit already ((Gift from the Gods for Ocean) together with some solid conversion work, and now the revolutionary adventure game. Shadowfire, things are a bit different.

If anything, it is the Shadowlire project - the idea which started the company off in the first place - that incorporates all of the elements that have made Donton successful so quickly. Originality, great graphics, technical excellence and teamwork.

Shadowfire is an icon-driven adventure (absolutely no text input) in which you control a 'super-team' of five characters whose mission impossible type task is to rescue a hostage from the clutches of the evil General Zoff.

I spoke to Dave Colclough (Commodore programmer) and Steve Cain (artist) who were largely responsible for the finished product - although Steve was quick to mention that everyone in the company had contributed to some extent. "We're not isolated teams," he explained. "We're like a big family here, including the arguments!"

So who had the idea for using icons in an adventure? Steve again. "There were always a lot of crazy ideas knocking around at Imagine. Ian Weatherburn had the idea for some sort of adventure with icons. When Imagine crashed we look it to Beyond, and they told us to go ahead."

However, Shadowfire has gone through several incarnations since then; originally the game had some text input – and only four team members. "The brief changed as it developed. We felt the overall team need more balance, so we created Sevrina - a female thief. We hope if gives the game a wider appeal."

The game scenario is set in a futuristic hi-tech world with cyborgs, time machines, and transporter beams...not unlike the equipment used to create it! I asked Dave to describe the various large black boxes in front of him.

"We use Sage micros as development machines," he told me. "This one's a Sage IV. It has a 68000 chip tunning at eight MegaHertz – effectively about eight times faster than a home micro." Other statistics include one MegaByte of Ram, logether with twelve Megs worth of memory on hard disc. "It's not just that it's faster," Dave explained. "If you're writing for more than one machine, you can use a cross-assembler to assemble the source code – one that has the same syntax for both machines – and than download into the target."

Dave, like the rest of the Denton programmers, had no formal computing experience before picking up on home computers – initially he studied naval architecture, while John Heap (Spectrum Shadowfire programmer) taught himself 280 code while on the dole. The arts side of Denton on the other had, are all ex-Liverpool School of Art. I asked Steve how, technically, they made the transition from other forms of art to computer graphics?

"You tend to learn very quickly or you don't learn at all. The same principles of design apply, you've just got different limitations - size, shape, colour and

resolution."

So how do they start designing on acreen images? "The girls (Ally Noble an ex-graphic designer and Karen Davis previously specialising in textile design) prefer to design on graph paper before putting it on-screen. I use a graphics tablet connected to the Sage - and then download the date to the target machine," said Steve.

The results, as seen on Shadowfire are unusually good – and there is yet another unusual aspect of the game yet to be released – A 'tuner' program that will allow the player to alter the strengths of the team and the opposition, which started life as in-house utility. An invaluable aid for those who like to dissect their games byte by byte.

But what does the future hold for Denton Designs after Shadowfire? Their next 'biggie' is Frankie Goes to Hollywood for Ocean, now in its final stages, and then some more conversion work. "Conversions are a waste of ability and creativity really," said Steve, "but they do

pay the wages!"

Shadowfire II in preliminary design stages with great promises of character animation. Three of the original team will survive to fight the next mission... but which three? (My money is firmly on Sevrina.)

The project after that will be a joint Denton/Beyond venture, which Steve promises to be "a cross between Rollerball and Squash." I can't wait.

What comes across most when chatting to the Denton team, is their enthusiasm for writing and designing their games. They enjoy what they're doing... and they do it very well, Combined with their firm ideas on how a business should be run - without fast cars - expect to hear a lot more of Denton Designs.

Hardare Review

Unfriendly

Product Cheetah Sweet Talker Micro Commodore 64 Price £24.95 Supplier Cheetah Marketing, 24 Ray Street, London EC1.

Sweet Talker didn't have many sweet nothings to whisper to meti's a classic example of "you get what you pay for", since it's probably the cheapest speech synth on the market but also offers the least in the way of user-friendliness.

Like other products, such as the Speech 84 from DK'Tronics/Currah, Sweet Talker comes in the form of a cartridge which plugs into the back of the C64, with a connecting lead to the audio/video socket.

Speech is synthesised by modulating an output signal with a filter designed to reproduce the sixty or so 'allophones' which can be combined to reproduce English words.

This is certainly preferable to having a limited preset vocabulary of digitally recorded real sounds, but the disadvantage is that allophonic speech synthesisers sound like British Rail announcers gargling yoghours.

Sweet Talker might still have been worth having, since it's partly the unreal speech sounds which make voice synths so much fun, but in order to keep costs down the chip used has not been supplied with any extra firmware. In other words, you have to load the driving software every time you want to use the Sweet Talker, and when you want it to

speak you have to type in strings of numbers rather than words. After typing in the short loader program, or loading it from the tape provided, words are entered in the form of data lines - for instance DATA 50,19,13,15,0, 1 would, when run, make the synth say cheetah, since these are the code numbers for the allophones CH, IY, TT, A, Pause, End.

It's all a lot simpler with the rival Speech 64, where there's no software to load and the interpreter lets you just type in 'cheetah', and gets on with the job of selecting and voicing the allophones itself.

The manual supplied with Sweet Talk-

er is sketchy was ay the least. A list of all the allophones available and their code numbers is given, but there are few suggestions on how to incorporate the unit in your own programs (though the demo routine on tape does illustrate some possible uses). There's no mention made of using machine code, and no prospect of any commercial software using the system.

Overail, it's hard to see Sweet Talker being very popular. Why settle for such an unfriendly device when there are better ones available for only a little extra outlay?

Chris Jenkins

Take it easy

Hardware Slomo Program Speed Controller Micro Spectrum/Commodore 64 Price £14.95 Sapplier Nidd Valley Products, Stepping Stone House, Thistle Hiull, Knaresborough, N Yorks.

ome arcade games start off at such a speed that it takes time to adjust to the controls. How pleasant if all games could take you slowly up from gende beginnings. The Slomo is designed to do just that, as it slows down the processing in an infinitely variable sweep from normal speed, through dead slow to completely frozen. Some people may regard it as an unfair method to cheat your way to high scores, though this it certainly one use for it.

The Slomo is available for several different computers and I have been looking at the Spectrum version, which plugs into the user port. At the other end of a short cable Ba little black box with one rotary speed control and two push buttons, labelled 'Slow Motion' and 'Freeze Frame'. I tried it first on Decathlon and managed to do a little better than usual.

If, like me, you wish your reactions were a little faster in some games, and can cope with accusations of cheating, this could be just what you're after.

John Scriven

Keeping contact

Hardware Power Switch Micro Spectrum/Electron Price £4.98 Supplier Rainbow Electronics Glebe House South Leigh Witney Oxon

hat's the difference between a BBC micro and an Amstrad, and an Electron or a Spectrum? Apart from a hundred and one other things, one small but irritating difference is the absence of an on/off switch. Most owners of the afore-mentioned machines are probably used to unplugging the power cables, but this undoubtedly increases wear and tear on the contacts, which will eventually wear out, particularly with a micro like the Spectrum that doesn't provide a hard reset.

Rainbow Electronics is one of several firms to produce an in-line on/off switch. This consists of a small black case about $8 \times 4 \times 2$ cm, with a rocker switch and LED on the top.

What more can I say? - it works very well and £4.95 is a small price to pay compared to the expense of getting a power socket replaced.

John Scriven

Horse of the Year

A clear round for Graham D Walkden with this show jumping simulation for the BBC B

his is a two player game in which the object is to quide your horse over a course of show-jumping fences in the shortest possible time. There are five different types of fence; The Water Jump, The Bush Jump, The Double Bar Jump, The Water and Bush Jump, and The Wall. They differ in size so require different factics.

Type in the program as it appears in the listing. (Disk users set Page to &1100 first and on no account press Break, as this will mean goodbye to all your typing). Save it in case of power-cuts, accidental Break pressing etc., then type Run. You will be greeted by the title page and the theme tune. If the tune drive you potty then press Escape and type *FX210,1 then Run, and the tune (and all other sound for that matter) will be no more

When you choose the play option the tune will cease (so unplug the cotton wool) and you will be asked how many screens you want per round. Choose any number between 2 and 9 and the crame will start. You control the white horse at the top left hand side of the screen by

using the following keys: A -accelerate, Z-brake/reverse, Return -jump.

The parabolic trajectory of the horse depends on its speed at the take-off point. The faster the horse is going, the further it will jump. Great skill is required when calculating the jumping speed as the 5 different fences require different approach speeds (The Bar fump requires two seperate jumps at slow speed). When in the air you cannot control your horse, which is logical because short of equestrian retro rockets there in no way you can alter its speed.

The name game

Keep all those names and addresses on tape with this useful program by Andrew Dagnall

his program is an address book program for the Commodore 64. The program will let you input: Name, Surname, Address in full. Post Code, Home Telephone No. and Work Telephone No. The address then has to be labelled residential or business by using keys (R)or(B) respectively. When you run the program you will be presented with a Menu.

Input – the cursor will appear under Name waiting for your input; type in the name, then press return. When return is pressed the cursor will jump to the next label. Enter required details (address, etc) using the same method. Repeat for all labels.

Change - you will be asked to anter one item of data, ie name, surname, post code, home number or work number.

If no details are know then just enter R

or B to find all entries under Residential or Business respectively. If the file found is the one you wish to change, Press C then the display will change to the input mode.

To change any details, overwrite existing details; any characters after the cursor will not be entered when return is pressed. Any details you do not wish to change, just press return. To leave any of the details blank, enter a space then press return.

When all details have been entered, press C to re-change or return to continue. You will then be asked to enter F to find any more files you wish to change or return for Menu.

Find - To find an address you will be asked to enter one item of data as for change. Use Fto find more data or return for Menu.

Save - When you have finished with the

program, if you have changed any files press F7 to save data to tape.

Before the program is used for the first time, save program as listed, then change Line 10 to DimAS(200,9):Goto 60 then run. Enter some addresses and save the data on tape.

On all subsequent uses the program can be loaded and run as listed.

Program Notes

| Line No | |
|-----------|------------------------------|
| 10-50 | Read data from tape. |
| 60-80 | Sei variables and sound. |
| 90 | Routine to simulate print |
| 100-200 | Input routine. |
| 210-420 | Up date screened at. |
| 430-810 | Print file card with labels. |
| 820-1255 | input and Change routines. |
| 1260-1550 | Find routine. |
| 1560-1700 | Menu. |
| 1710-1750 | Save data to tape. |

PROGRAMMERS

Digital Integration Limited is an expanding software house specialising in high quality original video games.

We require proficient machine code programmers for the design and development of home computer software. Applicants must have an extensive knowledge of Z80 or 6502 assembly language programming, creative talent, self motivation and strong interest in home computers. CP/M experience would be an advantage.

Highly competitive safaries offered according to experience, plus a profit sharing bonus scheme. Excellent working conditions.

Please send c.v. to: Digital Integration Limited Watchmoor Trade Centre, Watchmoor Road, CAMBERLEY, Surrey, GU15 3AJ Telephone: 0276 684959

Hardware 80 COLUMN PACK

Life in the fast lane

Make your Basic programs run faster with Part Two of Compiler by A. Mehmood

his week we present the remainder of Border x) where x has the result of the the supported functions.

Pause - The Pause command works in a different way from the way it works in standard Sinclair Basic, in that the pause command in the compiler has the effect of Pause 0. The Pause command however uses the same format as it does in standard Sinclair Basic (eg, Pause x, x being any integer between 0-855387). It should be noted the value of x is not taken into account and is only used to overcome the standard Sinclair Basic syntax checiana.

Strings - No Strings or String variables are supported, including string printing, or anything using double quotes.

Rnd - The Rnd command works in exactly the same way as it does in standard Sinclair Basic except that it produces a random number between 0-14 rather than 0-.99.

Border - The Border command works slightly differently from the Sinclair version. To get the required border colour the standard Sinclair Basic format should be used, (ic.

the Basic listing and the explanation of equation: $(y^*8)+x$ y is the colour of the border required and z is the ink colour of the lower half of the screen (bottom two lines), where all the error reports are produced.

Variables - Variables names can consist of any letter of the alphabet, and may be coupled with the number 1. This formal allows a maximum of 52 variables. To assign a variable the standard Sinclair Basic format should be

Arithmetic - Any arithmetic using + ,-,*,/, can be performed. Brackets may be used. Although the compiler can handle fairly complicated arithmetic it is advised to keep equations short.

Print - The Print command works approximately as it does in standard Sinclair Banc, however it can only have the following

Print At x,y;Chr\$ z; Chr\$ z or Print Tab y; Chr\$ 2; or Print Chr\$ 2; Chr\$ 2

This where x is the line number, y is the enclosing £2.75.

column number and z is the code of the character to be printed or any variable that exists within a program.

Draw - The Draw commend uses a slightly different form from those used in standard Sinclair Basic, in that all negative numbers must hold the result of the following: (negative number required) -1. The format of the command however is exactly the same as in standard Sinclair Basic, eg, Draw x, y.

All the above changes sometimes makes programs that are to be compiled incompatible with the way that standard Sinclair Basic works, however, this can be overcome by using commands which are compatible with both the Basic and the Compiler, changing commands before conversion or by simply omitting commands which are no! compatible.

Type in the compiler as shown in the listing taking great care, especially with Line ! which should have at least 200 characters in it.

Next week, how to convert your own programs, plus a demo program for the Compiler

If you would like a tape copy of Compiler without typing it in, write to the author of 30 Webber House, North St, Barking, Essex,

Interactive BASIC Programming for 48K ZX Spectrum & Spectrum + ATTENTION ALL SPECTRUM USERS! LEARN BASIC WITH YOUR HANDS ON THE KEYBOARD, NOT WITH YOUR HEAD IN A BO

LEARN BASIC WITH YOUR HANDS ON THE KEYBOARD, NOT WITH YOUR HEAD IN A BOOK! Now you can learn ZX BASIC programming with your Spectrum. 'Interactive BASIC Programming' is a unique package in twelve parts. Look at these features:

Plain English (yas, real English not Jargonese).

 Due to an amazing programming technique you will have complete control over Spectrum BASIC. So you can write, save and load programs while using 'Interactive BASIC Programming'.

All ZX BASIC is covered.

You'll learn about graphics (see some on this ad), colour, sound, motion, system variables, menus and much more, explained simply.

Problems are given with hints and answers in the form of programs that are put into BASIC for you to look at, run and after.

 You'll learn how to write your own games (by way of examples) and how to put your machine to serious use (e.g. graphs, problem solving, filing system).

More than 250K (yes, two hundred and fifty kilobytes).

 After sales support at no additional cost: write or telephone if you have any questions about Spectrum BASIC.

*An educational program which shows real inventiveness - better still it teaches Sinclair Basic."

-Popular Computing Weekly 7/3/85

Britain is the Software Capital of the World - far superior to the U.S.A. The computer revolution is just beginning and as the emphasis shifts from hardware to software WE are best placed to shape the future. The writing's on the wall: get actively involved while the industry is young.

(Amstrad, MSX, Atari 800XL, CBM 64, BBC Electron versions are in preparation.)

To receive the whole package by return of post send £9.95 (p & p free) to: EIGEN SOFTWARE 45 Bancroft Road, Widnes, Cheshire, WAS 0LR Tel. 051-423 6201

 $\hat{H}\psi = E\psi$ EIGEN SOFTWARE create reality

Key to numeracy

An on-screen calculator to use within your own programs from David T Payne

his program displays a calculator face on screen and operates as such using the number keys and '= '. The arithmetic functions have been moved to FI/F4 as indicated on screen; this has been done in order to avoid having to use the shift key and thus

maintain single keypress operation.

Two calculator windows are opened, the upper shows the first operand (Mem\$) together with the function (OP\$(OP)) and the lower displays the second operand (Get\$) or the result after the '= 'is pressed.

This utility could be altered to form a complete procedure which could be called from a larger program as and when required.

Procedures

Setup · Draws the calculator face and opens two windows for the calculator displays.

Get-Vaine - Selects valid keypresses and calls the next two procedures as required.

Put · Writes operands and results to calculator display

Calculate Does the calculation after — is pressed and calls PUT to display the result.

Keep — Can go in any programs; after alteration it is very easy just to enter Keep in order to bring the file up to date.

NAPOLEON'S

t is June 1815. Napoleon has escaped from his exile on Elba and has rallied the disillusioned soldiers of France in his side. Now, poised to invade Belgium, he has left behind a most important package . . . can you deliver it?

he first of a new series of 60K machine code adventures for the Commodore 64, Napoleon's Sandwiches is both challenging and witty, and will test your ingenuity

£7.95

Mail Order from:

4 Long Road Elason. Bournamouth BE10 SHL

SPECTRUM + /48 AMSTRAD CPC464/COMMODORE

The most accurate horse race predictor on the market

- ★ Tipster V2 took 18 months of trial and error before we arrived at the system that makes it the most accurate race predictor on the market.
- * Fully tested against other computer race predictors.
- * Tipster even performs better than the human tipsters from the top nine newspapers.
- * Many winners found at high prices.
- * For both flat and national racing.
- * The system will never go out of date.
- * We reveal the secrets of profitable betting.
- * Special tutor for the absolute beginner to racing.
- * Tipster also includes a program to calculate your returns for you.

If you can buy a more accurate race predictor we'll refund your money

Don't be tempted to buy cheep or inferior products. £14.95

E. I. BYSTEMS PO Box 171, Wolverhampion, West Midlands WV10 0PJ

Leaves all other race predictors in the paddocks. (Please state computer)

Super simulation

Making waves on any Amstrad machine - from the keyboard of John Kennedy

his program simulates the superposition of light - that is the resultant wave formed by two combined incident waves. It should be of interest to physics students as it shows constructive and destructive interference in a simple and easily understood manner.

When the program is run, it will ask for some data. The user should enter the wavelength of the two waves, noting that only wavelengths between I cm and I m are accepted. The computer will then ask for the wave offset. This is the number of degrees that B is ahead of A, eg

180 is half a wavelength ahead; 90 is a quarter; I and 360 will produce a zero offset.

The program will then draw a grid in which each square represents 1 cm and with a horizontal axis across from left to right representing zero displacement. The waves and their resultant will be drawn out in different colours and then made to flash, highlighting the two sets. Pressing space at this point will re-run the program.

Some example input data is given above.

| Wavelengths 5 and 5 | Offset 180 | Result destructive |
|------------------------|---------------|-----------------------|
| Sand 5 | 0 | constructive |
| 5 and 5 2 and 1.5 | 90 | mixture 'beats' |
| | _ | |

Beats are the regular changes in the amplitude of the resultant waves. They can be heard when two sound sources of similar amplitude but slightly different wavelength are used. Even the sound generator of the Amstrad will cause beats, try; Sound 1,1500,30000 followed by Sound 2,1501,30000.

Program Notes

The program has so many REM statements notes are almost unnecessary.

Line

70 If progam broken into, re-run.
150-340 Get data from user.
490-630 Draw grid and axis.
640-770 Draw actual waves.
780-950 Re-run?
960-970 On error routine.

Peek & Poke

Ace of clubs

A Moran, of Wolverhampton, writes:

I have owned a Jupiter Ace for over a year now, and having survived the shock of Jupiter Cantab's demise, I am still programming away.

If would help me in my efforts to master Forth if I could get in contact with other Ace users. Do you know of any clubs which would be of use to me or of any other Ace users in my vicinity?

Alt's strange how things work out... a few weeks ago someone asked me how many Aces had been made, and I said that I did not have the figures but that it could not be many. Not long after I received a letter from John L Noyce who runs the 'Jupiter Ace Users Club'. As well as informing me of the activities of the club, he also kindly informed me that the total number of Aces sold would appear to be below 8,000.

John can be contacted at PO Box 450, Brighton BN I 8GR.

Character building

Allan Smith, of Ferryhill, Co. Durham, writes:

of I own a 48K Spectrum which I got for my birthday. Whilst experimenting with different Pokes I came across an interesting effect. If you Poke 23606 with 100, all the characters in the character set seem to get mixed up. Why is this and how do I get the characters back? I have switch my machine off at the moment.

Location 23606 is the variable which holds the current displacement of the character set from its normal location. By changing the value of this variable (normally zero) you effectively shift the start address of the character set, but of course do not move. Hence you get peculiar values appearing. Pokeing this variable with zero restores matters to their original state.

Try this Allan... it is an interesting demonstration of the effects that changing this value can cause.

10 DIM A\$(704): FOR A = 1 TO 255: POKE 23606, A: PRINT AT 0,0;OVER 1;A\$ 20 NEXT A

Domestic drives

P Kernick, of Cardiff, writes:

Since my introduction to the world of home computers I have looked forward to the use of discs (or microdrives) as a means not only of information storage but also as an expansion of the computer's memory capabilities by the use of Dynamic Data Transfer. That is to say the transfer of data during the running of a program. The computer could then dump a predetermined part of its data and fill the space with new information possibly by means of a Load command. It is true that short time might be lost in doing this and it might not be suitable for arcade games, but it seems to me that it would be useful for domestic utilities where time is not important and where the file is divided into sections anyway. Please could you tell me whether DDT is possible with any home computer and if not why not? I have a 48K Spectrum.

I must confess that the Dynamic Data Transfer is new to me, although the concept E extremely well known. It is in fact what most programs written for large computer systems use. They of course have the advantage of being abler to use extremely high speed discs (many times fast-

er than floppies, and capable of transferring more data in one go). Having said that it is certainly feasible to implement this philosophy on any micro (even the cassette based ones), although performance is unlikely is be very good. The best approach would be to keep the amount of data being transferred as small as possible, in that way the delay experienced by the user of the program would be as little as possible, it has, I believe, been used on a number of American Adventure games on disc for the Commodore.

Array of errors

Andrew Robertson, of Kilwinning, Avrshire, writes:

I have recently purchased an Amstrad CFC 464 and I am keen to get started on finding out its capabilities.

While typing in a program I accidentally typed in q\$ rather than q\$. 1 edited the program but each time I run it I get "Array already dimensioned in 70" error. I have tried to erase it out but with no success. The line concerned is: 70 Dim #%(21,4), q\$(21), q\$(30). ь%(30,1), n\$(30). v\$(4), n%(30). Could you please help as I do not wish to retype it all again.

Your problem is quite A simply that in the line you specify there are two declarations of the array q\$. My quess is that there is actually an array g\$ also used in this program, and that one of the two declarations in line 70 should be for G\$ and not q\$. This will also mean (if I am right) that some of the other editing you have already done will also be incorrect. I presume that you have changed all the q\$ variables to q\$, this would seem to be incorrect.

One last possibility is that q\$(21) should actually be

s\$(21), thus fitting in with some of the other declarations in that statement. I'm sorry that I cannot be more specific but without seeing the entire program that's the best I can do.

Text mess

K Morren of Chelmsford Es-

I own a Commodore Vic 20, and I am fed up with having to mess about to get my text screen displays lined up properly. I am of course suffering from the Vic's well known 'missing Tab facility'.

Can you offer me any advice?

A Try this:—
20 POKE 781,X : POKE
782,Y

30 POKE 783,PEEK(783) AND 254

40 SYS 65520:RETURN

This subroutine will cause the cursor to move to the coordinates specified by X and Y.

Integral microspeech

A number of readers have written to me over the past weeks with queries regarding disabling the Currah Microspeech.

When the microspeech is plugged in it becomes an integral part of the spectrum operating system and Steve Currah who designed it; unfortunately doesn't know of any way that the installed unit can be disabled.

To eliminate potential damage to the expansion port (by removing and reconnecting the unit), Steve designed the Microslot motherboard expansion system. This is still available at around £14.95.

is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem Peek it to Phil Rogers and every week he will Poke back as many answers as he can. The address is Peek & Poke, PCW, 12-13 Little Newport Street, London WC2R 3LD

Arcade Avenue

GoGo crazy

a s promised last weak here are a whole host of tips and pointers for the excellent Firebird cheapie GoGo the Chost for the Commodore 84.

They come from Paul Flowers of Ipswich who has a high score of 34,000. Although you may feel this tan't very high Paul says he aims to "explore rather than score". In the long term he kopes to be able to offer detailed tips for each room which we can look forward to. First of all Paul offers these two passwords – Polly Paradise for Room 12 and Headache for Room 15, and continues with the following advice:

"You may find that if you rush straight into a room the ghosts have been timed to just get in the way of open barriers etc. The trick is to wait around and they will often get out of synch. The time limit shouldn't be a problem since collecting one object can restore it completely. The new boost you get, which can be lives, time, power or points, il that which il lit up just as you collect an object. Wait around near the object until the one you want comes

"At the start of the game collect as many extra lives as possible (five should do) then replenish lives, time and power as necessary. Don't worry about points until completely safe. Power is replenished anyway as soon as you enter a room and running out of time only loses one life – it's not the end of the world.

"Only use the invisibility spell if you have to and, if you must, don't leave it till the last minute. Don't forget it only works on the phantoms, not on any other object. If you use I wisely you will have enough to get you through the hardest screens but always keep your finger near the fire button in case a ghost appears from nowhere.

"Use the pause button

study the screens but remember that the easiest looking route often has the most awk-wardly timed phantoms. More narrow passages often turn out to be easier. One problem is that in some rooms you have to rely on precise positioning not to be killed – all 1 can say is don't get nervous, don't use a loose joystick and fix it to something solid e.g. a table or a rock (as the song goes).

"There are a number of dead ends which are not worth visiting at all, and also some one way passages. The chequered block in Room I won't kill you and you get extra points for eating it. There are also switches that open doors but do they do more than this as well? Can anyone help?

"Remember the disappearing walls are obviously only safe to pass when they are completely gone but sometimes you have to wait a bit longer than this or for some reason you get killed anyway. On the other hand if you wait for the moving barriers to be fully out of sight they will come down on top of you - you should get as near as possible and cross just as they reach head height.

"Finally, can anyone help with ups cheets or anything for Bruce Lee from US Gold, or give some high account numbers for Ghostbusters!".

Paul says that Chostbusters is his favourite game which just goes to show how tastes differ when you consider this letter from an old friend of the Avenue. Stuart Young of Glasgow: "Having shelled out \$10 I expect something better than small flickery graphics, a

laughable time, practically no gameplay, built in unplayability and radio interference to pass for speech. And talk about slow! You have time to travel from John O'Groats to Lands End by C5 before you spot a building flashing red.

"The thing is the Commodore version is almost as bad. It is a bit more challenging and the graphics are better but the non-existant gameplay is still there (or not there). All it is is a pretty good rendition of a popular tune".

This is pretty strong stuff Stuart but judging from the letters I get agreeing with you someone really should whisper in Activision's ear about the quality of their Spectrum conversions and their prices.

However, I have to say that regarding the C84 original you have to accept that some people prefer a slow-paced game, and perhaps more in the point it did represent a landmark in terms of the style of presentation, if not content, that really puts it into another league compared to Space Race. Hopefully we can look forward to them combining the marvellous details of Chostbusters with a better game idea.

Since we're already running out of space again, I shall go through the names and scores of the latest champions of our Games Wizard Competition next week, but there is one thing I really must deal with. There is a sizeable stack of letters here on my desk from people who want to know if they are the first to complete Virgin's Sorrery on the Austrad. Unfortunately it is difficult to give a definite

Ametrad Secret

Latic Kite

answer because so many people forget to date their achievements, but the first name that arrived in the mail was N Attwood of Churchdown. Gloucestershire.

Anyone else who is on the verge of writing in will have to accept that they aren't first, and it also goes without saying that we can't publish any of your tips since it is a competition game. Concerning the highest score, the leader to date is Mark Buttle of London with 91.250.

Now a letter has come from Stephen Kirby of Peterlee in Co Durham, who has finished Utimate's Staff of Karnath for the C64 on March 24th. He gives us some tips, most of which have been printed, except that Menhir is the spell that destroys the Staff at the end of the game, should you be so lucky to get that far. Please write again Stephen and tell me how to get the library piece before I go

Ultimate has also now released the follow-up to Staff of Karnath - Entombed, which looks very good indeed.

Finally, talking of saving people from insanity, many will jump for joy thanks to this poke from Robert Muir of London to get rid of those blasted grinning Sidhe in Tir Na Nog - Poke 34202,200. Robert says he has nearly finished the game having found Nuada's Sword, Lugh's Spear and the Stone of Fall and I'm sure we would all like to see your tips on how to get these, but I think etiquette demands that you should send them to Tony Bridge's column rather than here.

Tony Kendle

We are searching for the top UK computer games player – the best there is!

The very best of Britain's game players will get to fight it out on a number of top secret new games – scheduled for release in the autumn.

Here's how it weeks

Study the table below and look at the column for the machine you have — those are the games you'll need to master. Send your high scores in on the form below, making ourse that your notes are authenticated by a respossible individual signing the form. Buy more achieved using feethnical short-cuts — such as infinite Sives Poles — will not be accepted.

Between now and September Taky Results will be keeping you up to date on the Accasto
Avenue page with just who has the excess to beat. Then, in September, the toy three numers
on each machine will bettle it out for a placer in the final and the chance to be the first to play
our "800 secret" cause.

Tony Bridge's Adventure Corner

Club collection

dventure Clubs have been springing up all over the place in recent months, and although i've mentioned one or two, experience has shown that they are generally not successful. Apart from asking people to part with money for something which most people will be only too glad to give you for nothing (I mean help, of course; the Adventure Helpline in this magazine is designed to bring adventurers into contact to cove mutual help), the clubs, being run in the main by keen kids who eventually get snowed under by the response, often just don't deliver. If you are tempted to send money to any club of this nature, be sure that you can afford to lose it.

Having said all that, I have been sent some literature about a new club, thrillingly known as The Adventurers Club this one is being run as a business and offers quite a lot, It's also a bit more expensive than the others, £10 a year in fact, so think hard before joining. What the club offers is the usual Helpline service, both by mail and phone, and they say that they have solved "most adventures, even for the Dragon and other less popular machines . . . ". Also, you'll be sent a 20-page monthly member's Dossier, which includes details of all the latest adventures, comprehensive reviews of all (I) the programs released in the past 8 years in the UK (I'll believe that one when I see it!), monthly step-byaten articles on how to write your own adventures, plus discounted software (typically 20% off retail prices).

In no way do I personally endorse this

venture, and remind you of the disappointment other people have experienced after sending money to other Clubs - but the people behind this latest Club seem determined to make a go of it - and they can spell!

I've had one or two letters (two, actually) from Amstrad owners, telling me off for not mentioning their machine too often. I wouldn't agree with that; in the past few weeks, I think the elf has spoken about most of the Amstrad programs that he has been sent. The Corner has to reflect what is selling, and there are not too many adventures available for the Amstrad as yet, and practically all those are conversions from other machines. So, if you see mention of fewels of Babylon, for example, you can assume that it is more or less the same on one machine as another.

One such adventure is Message from Andromeds, from Interceptor, who have translated all of their fine adventures to the Amstrad. Scott Turner has written with advice on the game - "In the Mirror room - you must first of all collect the Rod, and then go to the Room. Now type 11,33,16.42. Then you will find yourself in another room, in which is a Crystal Sphere. 13,24 and 34,7" Scott also solved Forest at World's End (in just 3 hours! -although Message took 5 weeks). He has compiled a Help sheet and this is available to anyone sending him a SAE to Scott Turner, 1 Church Gate Cottages, Udimore, nr Rye, East Sussex.

On the subjects of Jewels, Gary Wilson had a query at the beginning of March about a certain key in the adventure. Now Sergeant Ivor Williams from BFPO or supplies the answer. "I imagine Gary has solved the problem now, but a tip for finding the key is: 6,29,40,14. Further tips to anyone starting off - a map is helpful also 35, 19, 40, 2 - 6, 35, 29, 40, 48, 4, 37, 10, 28, 21. Mazes - in thicket maze to Village, from Pool go 32,25,28,32,25, from Village, the exit is 443,43,1,1,1. Rocky path to Lion in Jungle is 1,1,1,1, and out from grassy slope through jungle is 25,25,43,32,32,32,25." Ivor goes on to say "I found Jewels to be a fantastic challenge and have written to interceptor for Forest at World's End and Heroes of Earn, hoping that they will be of an equally high standard.

Thanks for that information, Ivor, and thanks also for your offer of help to other adventurers working through this game. Write to him, with the usual SSAE, of course, to 910 Sgt Williams, I, 226 Engr Regt Wksps REME, BFPO 24.

Another address to try is that of John Wilson. He has solved fewels and Heroes of Karn, as well as Mikro-Gen's Witches Cauldron. Ask for his help: 26 Spotland Tops, Cutgate, Rochdale, Lances.

Gary Wilson was also asking about Foilkade's Adventure 200 - I've since found my notes on this one, Gary, but I can't tell you very much. The fish in the Rock Pool near the start is a Red Herring, of course, and you will need the coin from the pot-hole in order to cross the bridge. Can anyone help him any further?

Melbourne House's difficult program Sherlock is still baffling many Spectrum owners. I've passed on a few clues, and regular readers should now be able to prove Floulkes innocent! The problem now seems to be getting to Old Mill road. Evan Terras has Sherlock'd his way to the location, and says: 'You must first prove that Brown killed herself, that Jones killed Tricia Fander, prove Floulkes innocent and decode Basil's notes. Now, 3,12,27 and say 38,18,20. Then say 17,38,30,48,28,41."

Evan, incidentally, offers help in this adventure, as well as a long list of others, including Hampstead, Lords of Time, Hobbit and so on. Evan Terras, 9 Leslie Terrace Prestwick, Avrshire.

To prove that Brown killed herself (the chippings on the bridge Indicate that the gun was dropped) 44,27,12,31,8,47, and to prove that Jones killed Tricia, 18,9,40,23,39,48,8,9,12,27

Incidentally, the Record is a major clue -just examine II to find that the music is Baroque, whereas Basil is supposed to be playing Chopin. In the sternal quest for Sherlockbugs, which took over from Hobbitbugs as a relaxing pastime for Melbourne adventurers, Mr A'mour (I think, but he/she is AKA Bilbo), points out that if Lestrade Is in the Brown's or Jones' house on Monday, and you say to him: 'Go to Cobden Lane', every character in the game freezes for ever. This happens, too, on a couple of other occasions - which is very frustrating when it happens.

Finally, David Swain, who has been quiet lately, has written offering help to anyone working on Wheel of Fortune, from Epic software. David is very knowledgeable about most BBC adventures, including Acornsoft's epics, level 9 and so on. David Swain, 31 Beech Croft Road, Oxford.

I NORTH 3 FER 3 GO 4 COCONUT 5 TAKE 8 YOU? Winning parase No 22: "Naked earl lost in fog" from B Bamberger, Craigdale Road, Hornchurch, Essex who receives £25. Others who came close were "All-night snooker? Daft!" from T Burdis of Second Avenue, London and "Adolf Hitler is no gent!" from Humphrey Dunn of Shrewsbury.

(10) Tir Na Nog (Spectrum/ C64)

Now voting on week 24 - £25 to win

Each week Popular is compiling its own special software top ten chart - compiled by YOU.

And each week we will send £25 to the person who sends in, with their chart votes, the most original (witty, neat or clever - but never rude) phrase or sentence made up from the letters (you don't have to use them all) in the titles of the top three programs in this week's chart, published above.

You can still vote in the chart without making up a slogan - but you won't be in with a chance of winning the prize.

All you have to do is fill in the form below (or copy it out if you don't want to damage your magazine) and send it off to: Top 10, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2H 7PP.

Voting for Week 24 closes at 2pm on Wednesday May 8 1985. Entries received after that time will not be eligible for inclusion in that week's voting. The judges decision in final. Only one entry per individual per week will be allowed.

New Releases

ONE OF THE BEST

Arnhem is, quite simply, one of the best computer wargames! I have yet seen. Visually it's very attractive indeed, with a neat, easily understood map and large chunky units.

There are four separate scenarios covering various aspects of the Arnhem operations, and a fifth scenario which links them all together as a campaign game.

Giving your troops orders is simplicity itself, using a menu driven system, although after a while it may become rather too basic.

You can choose to play a one, two or three player game, although I personally think the only one worth its salt is the option to play the computer. I can never understand why companies think people want two player wargames!

Once you have ordered all your units around, you sit back and watch them run. The great thing about the game is that you can change a force's size – small and you can move

along roads and cross bridges, large and you light better. On screen, they grow and contract rather like some strange anemone.

I don't know yet how good an opponent the computer makes, but it wiped the floor with me the first two times.

It's also worth noting the new style packaging that CCS are using.

COLLECT AND DODGE

'Most irritatingly infectious music' vote this week goes to Rong Strikes Back, an Ocean game originally on the Commodore and now converted to the Amstrad.

h's basically 'collect and dodge', the plot involving a series of screens of big dipers, complete with roving buggies that move around the track - you climb the track collecting bits and pieces and then rescue the helpless damsel.

Success means knowing when to climb to safety up a ladder and when to make a dash for it over the next bit of track. The music is horribly fairground-like. Still the game's pretty addictive.

BI ITZKRIEG

Entombed is Ultimate's follow up to The Staff of Karnath and it proves, if proof were needed, that the company is as capable of wiping the floor with most other Commodore houses as it has been capable of blitzkrieging the Spectrum market.

Entombed has Sir Arthur Pendragon trapped in the vaults of a mysterious pyramid seeking scrolls which have the secret of escape. The scenario, like Staff, is in three dimensions; you may move both into the screen and out from it into new tooms and corridors.

There are both dangers and puzzles. Puzzles include how on earth to release the giant statue that blocks you way in the beginning and get worse. So far I've mastered that. found the magic whip and have wandered about until I die - I think I know what to do with the raven though and next time . . . baddies include a mummy complete with loose bandages, a very angry sounding insect and a scorpion which sounds like it's tap dancing.

The graphics are, of course, stunning; wall upon wall of Egyptian drawings and hieroglyphics, a perfectly animated taven, excellent tumbling fireballs and so on.

So far my two favourite features are the jump option, where the extremely dignified Arthur Pendrag-

on tucks in his arms like a pair of pawns and bounces up and down like a rabbit (it cracks me up everytime) and the whip. The magic whip which replaces the ubiquitous laser gun found in lesser games swishes and cracks with utter realism - you tend to use it just to get the sound effects.

Entombed has everything: graphics about tentimes better than most other Commodore games and advanture elements that will keep you baffled for ages. The best Commodore game this year - no question.

SKILFUL

Jonah Barrington's Squashie a technically excellent version of the sport of advertising and media people everywhere. It's on computer for those of us whose thighs lack ripple and whose grim competitive determination extends as far as insisting to smaller members of the family that The Day the Universe Changed be turned to another channel.

The game play and graphics on both the Spectrum and Commodore versions are very much Match Point in style - neatly animated figures and sharp control responses that let you introduce a good deal of skill into the game which, for those of you unfamiliar with it, involves hitting a very small ball acrainst a wall with such determination and force that your face and neck muscles get locked into the kind of facial grimace that made Kirk Douglas the kind of man he is today. You Also go Eununpfffffffff and

The Commodore version of game has excellent speech à la Ghostbusters, using a technique New Generation call Represented. Here it has Jonah Barrington himself calling "one love, two love, three love..." (you get the idea). The speech works fine except that on the version we have there is some sort of but and the second time round Jonah appears to have turned Harold Macmillan: "cocconnnnnnn

lowwwwwfff, towghooo lowwwwwfff," etc. Maybe that's what happens to real squash players if they play two games in a row.

The speech on the Spectrum version doesn't have that fault, but instead, it sounds as though Jonah Barrungton has been gagged and tied up in the dressing room: lloooo, "nanna territ lloooo,", and so on, Personally I think it's pretty addictive and if my neck muscles keep on going the way they are I'll be ready to lead Roman slaves in rebellion any day

BURSTING FORTH

Now the Amstrad can run Forth, the programming language where the fundamental concept is the word - a bit like the Old Testament really. Forth has two massive virtues - it is very fast and comparatively easy to learn.

The original Forth was a fairly dry affair, concerned with mathematical calculation, lists and the like. Consequently versions of the language for home micros tend to be somewhat customised for each machine. Amstrad Forth has, obviously, commands for sound and graphics and also uses the tape as a kind of Virtual Memory System.

The program has also been designed to be compatible with all Amstrad Roms and other extensions to Rom, so should work with the new 664 as well. For programming ease, there are such useful things as a cursor screen editor and a stack print-out. The manual is better than usual with some effort you might be able to learn Forth with it although a separate Forth manual might still be a good

RIGHT TRACKS

Mastertronic's marketno techniques may be as subtle as a Sun editorial, but you and I get to do very well out of it.

Aside from the fact that Mastertronic III causing a lot of companies to start similar budget software operations expect more announcements soon - the quality of the soft-

Ed - education.

ware at £1.99 is getting very good.

Loco Motion for the Spectrum is basically a slidingblock puzzle where what you have to do is rearrange railway tracks such that a little engine can travel along over every square on the acreen. It's not original but it's beautifully programmed sprites, sound effects, explosions and lots of smooth movement.

Here's an example of the kind of effort that has been put into the game: you can temporarily halt the train whilst you think how on earth you are going to rearrange the track and a stop watch ticks away the time, a little shutter moving round as the seconds pass by. It looks marvelous and is the kind of detail that is frequently lacking in considerably more expensive games. Buy it.

ANTI-NUKE

Assassin is the latest in Robico Software's series for machine code text adventures of the BBC. Its previous offering, Island of Xaan, was highly regarded among adventure purists for the quality of its location descriptions and deviousness of the puzzles.

Assassin is more of the same: text is compressed to prove a substantial game with 220 locations and extensive, atmospheric descriptions. This is an adventure with a specific task – assassinate General Garantz who is threatening to nuke the world.

Opening locations are very effective - it took me several goes before I managed to avoid being blown up by the tape recorder containing my orders - it self-destructs and you only get one go to issue the right command. Congratulating myself on this lucky escape I was immediately assessmated myself.

There are characters whose help you'll need and a lot of different problems before you make it to the mili-

tary base where the General resides. Good to see there are still a few programs around that can make you envious of BBC owners.

ONE-OFF

I am sometimes a little wary of commenting upon certain kinds of educational software, because, apart from anything else, the perception of a program by young children will (sometimes) be different from my own.

That said, I really don't think that there can be any justification whatsoever for the wopping £20 price tag Wiley/Jacaranda software have put on Raft Away River, other than what they think the schools will pay. A goodish program at, say, £8 becomes a rip-off at that price.

Raft Away River is an educational game where the secret of winning is for two or more players to co-operate and set tasks into the right order. You are on an island and to survive and move around you will need to eat and build a raft - to do these things you must give the computer instructions in the right order, eg, cut tree, carry logs, etc. and since different players have different objects with them they must do different things, eg, one fishes, another cuts the tree, etc.

Instructions are simply a matter of pressing a key from

A to U - the manual says which key does which action. I'm sure the game does teach some logical thought but the programming involved must have been prefty trivial. Essentially it's a program that can only be played once, although the problem may be solved in a number of ways, since once the basic sequences of instructions are found, that's it.

SLOW & SUBTLE

Operation Whirlwind is the latest of Ariolasoft's imported American hits to be released. It is a wargame in the classic mould but with all commands (well, most commands) issued through the joystick.

The game is the kind of things experienced wargamers will love - it's all a matter of working out resources, planning movements meticulously, and using devious tactics. There are few concessions to arcade freaks apart from the occasional battle noise, since the computer simply displays a

map and the location of units and other defences.

It's a game of great subtlety where thought is all and it hardly matters how slow you are on the joystick. What does matter is paying close attention to the movement patterns of the computer's forces and checking relative strengths constantly – know when to stop and dig in for a while.

JUMP FOR JOY

Blagger is now available for the C16. In the past I have been fairly unenthusiastic about the game and I still find all (well nearly all) the M.M. derivatives somewhat tedious but then this is the C16 we're talking about.

Blagger on the C16 is actually a remarkable programming achievement - the game looks much like the Commodore 64 original and has 20 screens - that's a lot for little memory.

The game involves moving a little figure around various wacky screens collecting keys, dodging various wacky objects like lightbulbs and trucks. The art is to know when and where to jump. Compared with the general level of C16 software it's extramely good.

Decline and fall?

A il the signs would seem to show that the home-computer boom, if not almost over, is certainly on the decline.

Almost certainly one of the causes of the decline we all hear and read so much about is the fickle 'craze' element. Having sampled micros, people are now going on to the next craze, whatever that is,

But another, possibly more significant element is quality. Whatever happened to quality? The lack of it could prove to be a major contributory factor to the demise of the British home computer industry.

Take Oric. On paper the Oric-1 had a much better specification than the Spectrum, better sound (what hadn't?), an RGB output and Centronics interface built in. The keyboard, although pretty lousy, at least had a slight resemblance to a type-writer keyboard, and was far less confusing for the keyboard novice. The Basic, too, was much better than the Spectrum's toy town version. The early Orics were plagued with video level problems, however, and although these were later fixed, the damage had been done.

Another lack of quality showed in the bug-laden Rom, and rather than offer everyone free (or extremely cheap). Rom up-grades, (a plug-in cartridge would have been perfectly feasible) as I feel they should have done. Oric alienated users by launching the Atmos. This did have a better keyboard, but still drew elliptical 'circles' and lacked what I would call true file handling, only being

able to store and recall arrays.

Another case in point is the Sinclair QL. On paper the ides of a cheap machine with an almost 16-bit processor. 128K of Ram, and very high-resolution graphics is pretty good. But how a large company like Sinclair Research could manufacture and sell a machine with such a terrible design fault as the edges of the picture being outside the edges of the TV Monitor screen is beyond me. The QL may be cheap, but this advantage is off-set by the need to buy a specially modified monitor to 'squash' the picture.

The main disadvantage, though, is the microdrives. The spread of independent disc systems for the QL must be an indicator of opinion. No-one would trust important data to those things - I know I wouldn't.

To cap all this, the QL was launched long before it was really ready, and has already gone through several changes of Rom.

If Atari deliver the goods with their ST, offering a proper keyboard, real discs, 68000 processor and GEM as an operating system, I know which I'd prefer to buy.

The computer market seems set to split into three groups.

Firstly, the business user, people with BM PC's and Apple Macintoshes.

Secondly, the consumer goods market, people who buy home computers like they buy microwave ovens or video recorders or stereos. A prime example of the consumer goods market machine in the Amstrad CPC 484. Coming complete with a monitor and cassette deck, it is a complete take home, plug it in and use system – the music centre of the computer world, with no plates of spaghetti hanging out the back.

The third market? Where it all began, the true enthusiasts. They started it all way back, and they'll keep it going in the original spirit. The enthusiasts want a versatile, expandable, no-limit machine, and are willing to get down where no software exists and write their own, wield a soldering iron, and get to the heart of their machine.

Antony J. Shepherd

Recurring nightmare

Puzzle No 156

The evaluation of reciprocals in decimal form can have some curious results. Take the following examples: The decimal value of ½ has a single recurring decimal: 0.33333... The decimal value of 1/11 has two recurring decimals: 0.090809...

Other reciprocals have an even larger number of decimal places which recur in cycles. For example the decimal value of 1/97 has a cycle of ninety-six such numbers.

Can you determine the 7,6989 digits in the recurring cycle in the reciprocal of 7699? We don't expect you to list all of them – just tell us the eleven digits which are found at the 7000th to 7010th decimal places.

Solution to Puzzle 151

A triangular pyramid of 15 tiers (680 tins) can also be formed into two smaller pyramids of 8 and 14 tiers (120 and 580 tins respectively).

```
10 DIM T(189).P(189)

IN 9-8
39 FDR N=; TD | 180
48 S=54N
59 T(N) =5
56 MEXT N
76 S=6
88 FDR N=1 TD 180
99 S=84T(N)
100 P 1(1)=8
110 NCNT N
120 FDR N=41 TD 98
120 FDR N=41 TD 99
148 FDR N=41 TD 99
149 FD
```

A triangular pyramid, or 'tetrahedron', is formed by building successive tiers of 'triangular' numbers: ie 1+3+6+10+... The triangular numbers are worked out in sequence and placed in the array (7). These are then converted into the corresponding 'pyramidal' numbers in array (P). Once this has been done the array (P) is tested to determine if two different numbers in that array sum to a third such number.

Winner of Puzzle 151

The winner is M A Broomfield of Leicester Row, Coventry, who receives £10.

Rules

The closing date of Puzzle 186 is May 27.
